

Sagem-Interstar to unveil a new release of its boardless FoIP fax server software at VoiceCon IP Telephony and VoIP event

Sagem-Interstar, formerly Interstar Technologies, will unveil the latest new release of its boardless XMediusFAX SP Edition T.38 Fax over IP (FoIP) fax server software, ideal for organizations requiring multi-tenant, redundant fax server support for heavy fax volumes — without the added expense of fax boards.

Montreal, Canada, August 15, 2006 — Sagem-Interstar Inc. (www.faxserver.com), the global leader in boardless IP fax software for VoIP networks, will be unveiling the latest software release of its field-proven XMediusFAX SP at next week's VoiceCon Fall 2006 tradeshow (Booth # 641 – North Hall), being held August 21-24, at the Moscone Center in San Francisco, CA.

XMediusFAX SP 5.0 is the latest evolution in the XMediusFAX T.38 Boardless Fax over IP (FoIP) product line. It maintains Sagem-Interstar's technology leadership in the FoIP fax server market, and contains a number of unique features including:

- T.38 multi-tenancy (XMediusFAX is the world's only multi-tenant FoIP solution that partitions service provider/large enterprise networks into hundreds of virtual fax servers, each with individual settings, queues, and administrators)
- System monitoring and alerts through SNMP
- Built-in server redundancy
- Ability to handle up to 480 fax channels per server
- Boardless desktop IP faxing (without expensive fax boards)
- Web-based fax composition
- Support for international character sets

The product will be of interest to any service provider or large enterprise that has deployed or plans to deploy an IP telephony infrastructure and wants to address the "fax problem" in IP networks with an elegant and economical software solution that is field-proven to manage large fax volumes and deliver high levels of reliability and availability.

"Sagem-Interstar is the industry's leader in FoIP technology and dominates the market for boardless FoIP fax servers. We were the first vendor to field a T.38 FoIP fax server when we launched our XMediusFAX product line in 2002," said Martin Demers, General Manager of Sagem-Interstar Inc. "Since 2002, the boardless XMediusFAX FoIP product line has helped thousands of customers realize the full cost savings and increased flexibility of their IP telephony investment."

About XMediusFAX SP Release 5.0

XMediusFAX is a software product that enables users to send and receive faxes like email. In a unified messaging deployment, faxes share a common inbox along with email and voicemail. XMediusFAX uses the T.38 Fax over IP protocol to talk directly to VoIP gateways from vendors, such as Cisco, Avaya, AudioCodes, 3Com, Alcatel, and Vegastream. It allows customers to leverage their existing IP Telephony infrastructure to reliably send and receive faxes without purchasing specialized fax boards.

XMediusFAX SP partitions networks into hundreds of virtual fax servers, each with their own settings, queues, and administrators. The solution is ideal for companies requiring support for multiple T1s on a single server, whether they are large enterprises with several branch offices worldwide or simply an enterprise of any size that wants to accurately account for costs by business unit or by department. XMediusFAX enables easy planning, monitoring and management of an organization's own fax service.

Award-Winning XMediusFAX SP Benefits:

- **Fault tolerance, built-in redundancy (clustering) and SSL encryption for secure, reliable T.38 FoIP:** solid performance for fax outsourcing and email-based faxing. T.38 FoIP is a reliable alternative to standard voice CODECs.
- **Scalability to 480 fax channels per server.** Other industry solutions are limited to 96 channels per server because of their reliance on fax boards and less efficient software drivers.
- **Enables service providers and enterprises to control costs and to increase cash flow** by purchasing their own FoIP software, instead of re-branding 3rd party fax services. XMediusFAX SP enables easy packaging, marketing and expansion of fax services per evolving business needs.
- **Boardless FoIP: simple installation/upgrade.** As the world's first boardless FoIP solution, XMediusFAX does not require fax boards. This means easy installation, rapid upgrade via only a software license adjustment, reduced costs and greater ROI.

About Sagem-Interstar Inc.

Sagem-Interstar Inc., the North American subsidiary of European mobile/broadband communications leader Sagem Communication (SAFRAN Group [Paris: SAF.PA]; www.safran-na.com), is "Changing the Way You Fax" worldwide.

As the global pioneer of boardless T.38 Fax over IP (FoIP) fax server solutions for VoIP networks, Sagem-Interstar (formerly named Interstar Technologies Inc.) is well-known for its award-winning XMediusFAX® (boardless T.38 FoIP) and LightningFAX® (for legacy fax boards) fax server software, which cater to enterprise, government and service provider accounts of all sizes. With thousands of systems installed in more than 40 countries, Sagem-Interstar dominates the worldwide IP fax server market for the 4th consecutive year, leading with nearly 75% market share, per Davidson Consulting in a July 2005 study.
