

## **XMediusFAX® 5.5 T.38 Boardless FoIP Now Shipping Worldwide with Enhanced Active Directory Integration**

*XMediusFAX Release 5.5, the latest evolution of Sagem-Interstar's market-leading boardless T.38 Fax over IP server software suite, now flaunts major new architectural advancements, flexibility and unprecedented enhancements, enabling organizations to simplify fax user administration processes and leverage ROI on their VoIP infrastructures.*

**Montreal, Canada, September 5, 2007** – [Sagem-Interstar Inc.](#) (SAFRAN Group), the global leader in boardless IP fax software for VoIP networks since 2002, announced today that Release 5.5 of its award-winning XMediusFAX T.38 Fax over IP (FoIP) software is now commercially available worldwide. Customers have the choice of any of the three XMediusFAX 5.5 versions: Enterprise for organizations of all sizes; SP for service providers and large enterprises; and Express for 100 users or less. XMediusFAX Release 5.5 fax-enables VoIP networks by integrating seamlessly with the VoIP gateways of all industry-leading IP Telephony vendors.

The XMediusFAX Release 5.5 fax server offers major highlights such as:

- **Key architectural advancements for XMediusFAX Enterprise:** Release 5.5 leverages XMediusFAX SP's industry-leading and field-proven technology, which provides benefits such as: high scalability and optimized performance; SOA-compliant architecture and open standards database; and centralized administration. XMediusFAX SP leads the FoIP market as the only boardless fax server product that offers both "multi-tenancy" and "built-in redundancy" for mission-critical faxing. Release 5.5 allows for a seamless and highly scalable upgrade path from one product version to another, as customers' fax requirements evolve.
- **Enhanced Active Directory integration:** Fully supports multiple LDAP-based directories such as Active Directory and Lotus Domino without any database schema modifications. It simplifies various administrative functions and eliminates the need for multiple user databases, since XMediusFAX retrieves user data from existing LDAP-based directories.
- **Extended third-party support:** Supports new or recently updated Microsoft products such as Windows Vista, Office 2007, and Microsoft Exchange 2007 (with 64-bit support). The new SMTP-based integration allows for backwards compatibility, while simplifying the required configurations on the Microsoft Exchange Server.
- **Multilingual support:** XMediusFAX now offers enhanced user interface options in English, French, German, Italian, Portuguese and Spanish.

"Sagem-Interstar's XMediusFAX boardless FoIP solutions are the most field-proven T.38 fax servers on the market today. They are also future-ready. Our latest product lineup with enhanced LDAP directory integration for simplified user management and our unique Microsoft Exchange 2007 integration are killer features that heighten an organization's productivity," said Jean Champagne, General Manager of Sagem-Interstar. "XMediusFAX's technology and scalability help organizations of all sizes leverage their VoIP investments, streamline fax flow, accommodate growth, and consolidate faxes for secure document delivery that creates an audit trail for Sarbanes-Oxley and HIPAA compliance."

With XMediusFAX Release 5.5, users benefit from several electronic methods for transmitting faxes: Web client, existing email interfaces, or SendFax desktop client for maximum flexibility. They can also take advantage of XMediusFAX's diverse MFP integrations for easy and secure paper-based faxing, or specialized integrations provided by the Java API and XML toolkits for customizing back-end enterprise applications.
