

IP Fax Software Leader, Sagem-Interstar, Unveils a New XMediusFAX® T.38 FoIP Release at Avaya Users Conference

XMediusFAX Release 5.5, the latest evolution of Sagem-Interstar's industry-leading IP fax server software suite, rolls out this month. This new release includes major architectural advancements and numerous unprecedented functionality enhancements to the entire boardless T.38 Fax over IP suite.

Montreal, Canada, May 23, 2007 – [Sagem-Interstar Inc.](#) (SAFRAN Group), the global leader in boardless IP fax software for VoIP networks since 2002, announced today that Release 5.5 of its award-winning XMediusFAX T.38 Fax over IP (FoIP) software will ship this month. XMediusFAX Enterprise (for organizations of all sizes), SP (for service providers and large enterprises), and Express (for 100 users or less), will all deliver unprecedented feature sets. Release 5.5 was unveiled at the InAAU International Conference (International Alliance of Avaya Users), May 20–24, 2007, Henry B. Gonzalez Convention Center (Booth #210) in San Antonio, TX.

XMediusFAX Release 5.5 fax server software fax-enables VoIP networks by integrating seamlessly with VoIP gateways from industry-leading IP Telephony vendors such as Avaya, Cisco, and AudioCodes. Release 5.5 offers salient highlights such as:

- **Key architectural advancements for XMediusFAX Enterprise:** Release 5.5 leverages XMediusFAX SP's industry-leading and field-proven technology, which provides benefits such as: high scalability and optimized performance; open standards architecture and database; and centralized administration through a Microsoft Management Console (MMC). XMediusFAX SP still leads the FoIP market as the only boardless fax server product that offers both "multi-tenancy" and "built-in redundancy" for mission-critical faxing. Release 5.5 allows for a seamless and highly scalable upgrade path from one product version to another, as customers' fax requirements evolve.
- **Enhanced directory integration:** Fully supports multiple LDAP-based directories such as Active Directory and Lotus Domino without any database schema modifications. It streamlines various administrative functions and eliminates the need to load and maintain user-account data in XMediusFAX through the retrieval of user data from existing directories.
- **Extended third-party support:** Support for new or recently updated Microsoft products such as Windows Vista, Office 2007, and Microsoft Exchange 2007 (with 64-bit support).
- **Multilingual support:** XMediusFAX now offers enhanced user interface options in English, French, German, Italian, Portuguese and Spanish.

"XMediusFAX Enterprise Release 5.5 is the next-generation T.38 FoIP solution. It targets organizations of all sizes, and is the most future-ready technology available on the fax server market. Employing features of XMediusFAX SP's robust, standards-based architecture – and with its new, enhanced directory integration support – XMediusFAX Enterprise is solidly poised to continue its technology leadership," said Jean Champagne, General Manager of Sagem-Interstar. "The XMediusFAX boardless T.38 FoIP software suite optimizes an organization's VoIP investment. XMediusFAX is also the industry's only Avaya Compliant-Tested T.38 FoIP server that allows for IP fax deployment without the expense of additional hardware."
